*O-PitEco is a digital tool that allows the user to calculate, evaluate and track environmental impacts of the drilling and blasting operations on each site and on each blast.*

## Life Cycles stages

On this module you can create multiple life stages of your products.

## Database

You can add multiple drilling impact details, explosive emissions information for booster, bulk, cartridge, or detonating cord. Compare products impacts and control your green area characteristics such as CO<sub>2</sub> absorption.

## Projects

Create projects and blasts, input their design characteristics, drilling, charging setup and initiation system details.

The result is the super friendly overview window where you can set Emissions Thresholds and manage environmental impacts such as Global Warming of your operations.

Track your emissions over time, the planted trees target and connect with Carbon Credits availability.
